1、修改文件 `src/Adapter/Product/ProductDataProvider.php`

找到方法名：`public function getImage($id_image)`

修改:

```
`'base_image_url' => _THEME_PROD_DIR_ . $imageData->getImgPath(),`
```

为:

`'base_image_url' => '/' . \Configuration::get('ETCLOUDIMAGE_ACCOUNT_DOMAIN') . '/v7/' . $imageData->getImgPath() . '.jpg?w=98&h=98p='`,

```
public function getImage($id_image)
{
    $imageData = new Image((int)$id_image);
    return [
        'id' => $imageData->id,
        'id_product' => $imageData->id_product,
        'position' => $imageData->position,
        'cover' => $imageData->cover ? true : false,
        'legend' => $imageData->legend,
        'format' => $imageData->image_format,
        //base_image_url' => _THEME_PROD_DIR_ . $imageData->getImgPath(),
        'base_image_url' => '/' . \Configuration::get( key: 'ETCLOUDIMAGE_ACCOUNT_DOMAIN') . '/v7/' . $imageData->getImgPath() . '.jpg?w=98&h=98p=',
    ];
}
```

2、修改文件 `src/Adapter/Image/ImageRetriever.php`

找到方法名 `public function getImage($object, $id_image)`

注释掉:

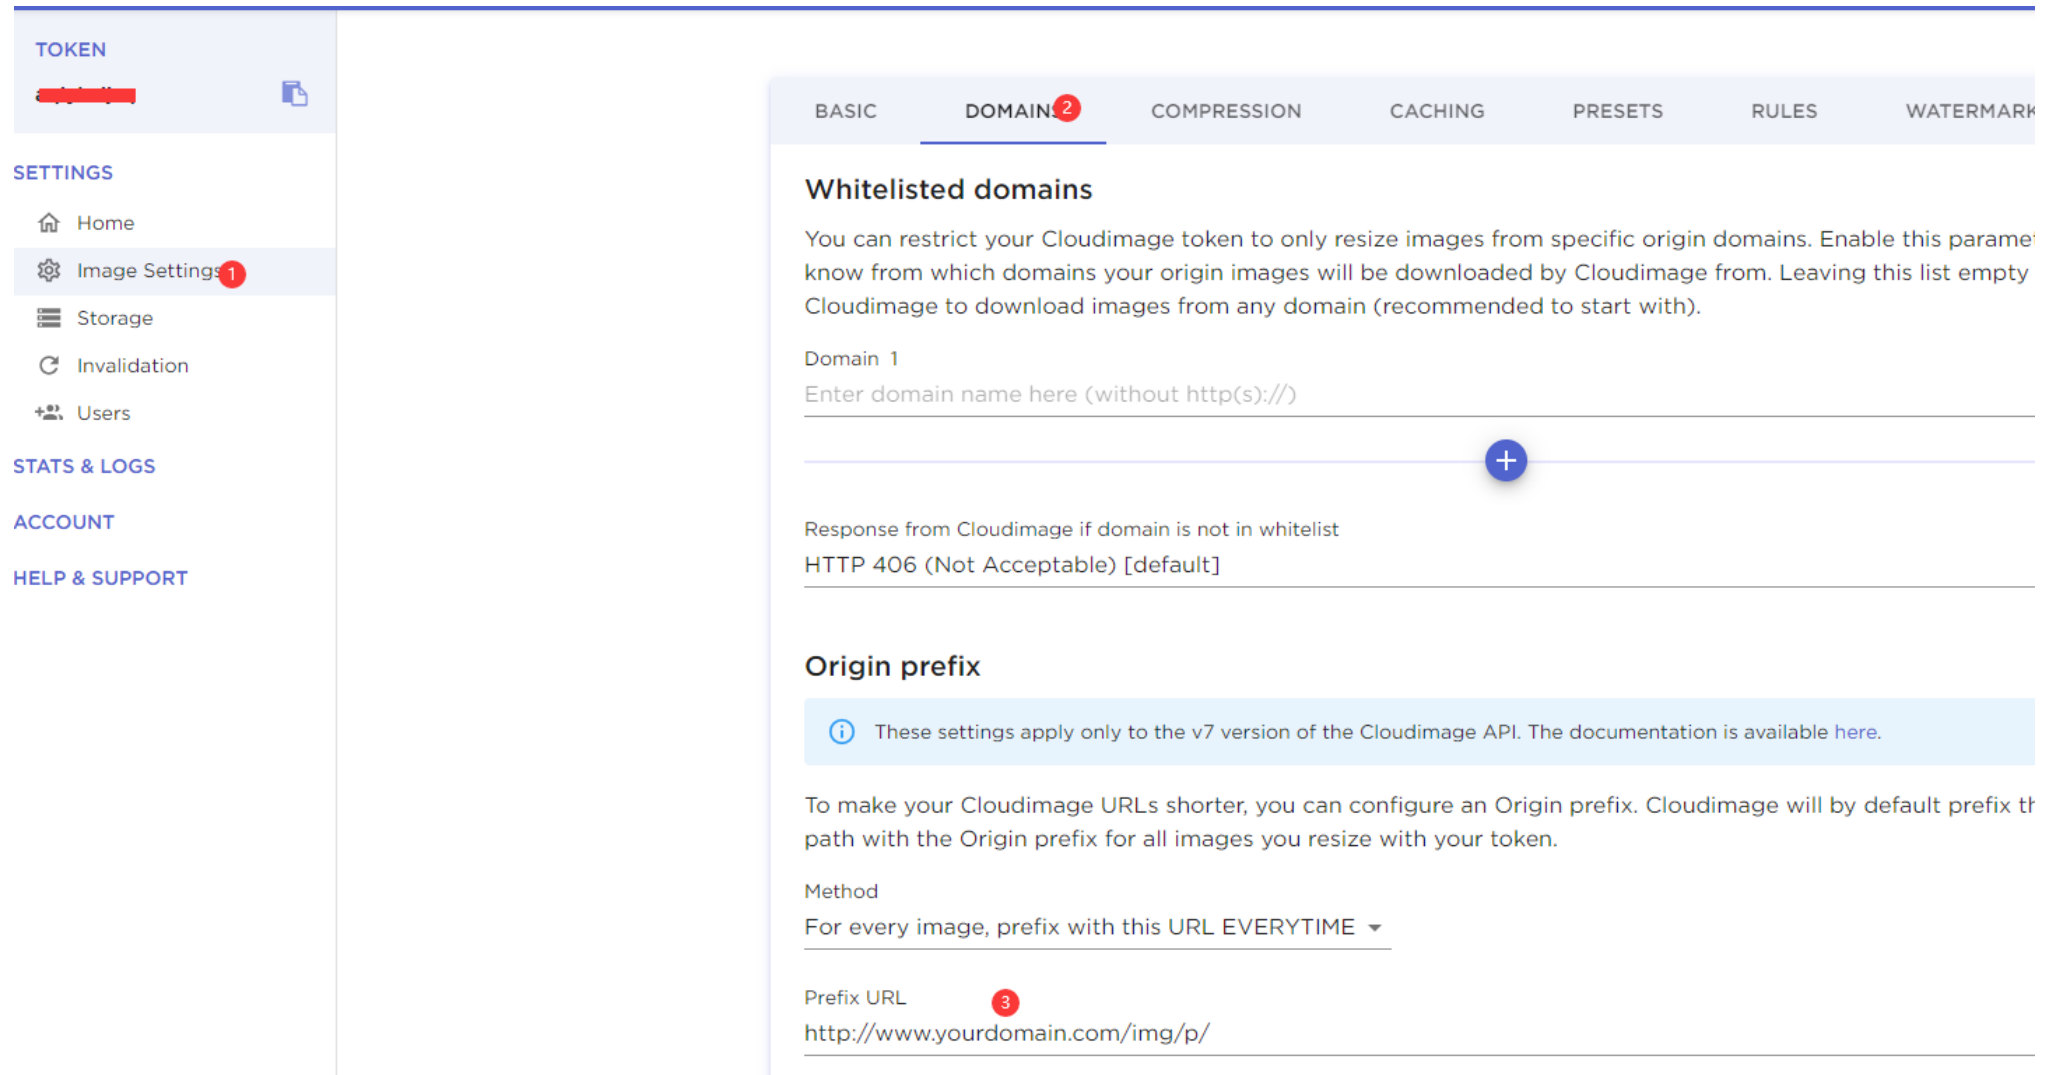

```
$resizedImagePath = implode(DIRECTORY_SEPARATOR, [
    $imageFolderPath,

    $id_image . '-' . $image_type['name'] . '.' . $ext,
```

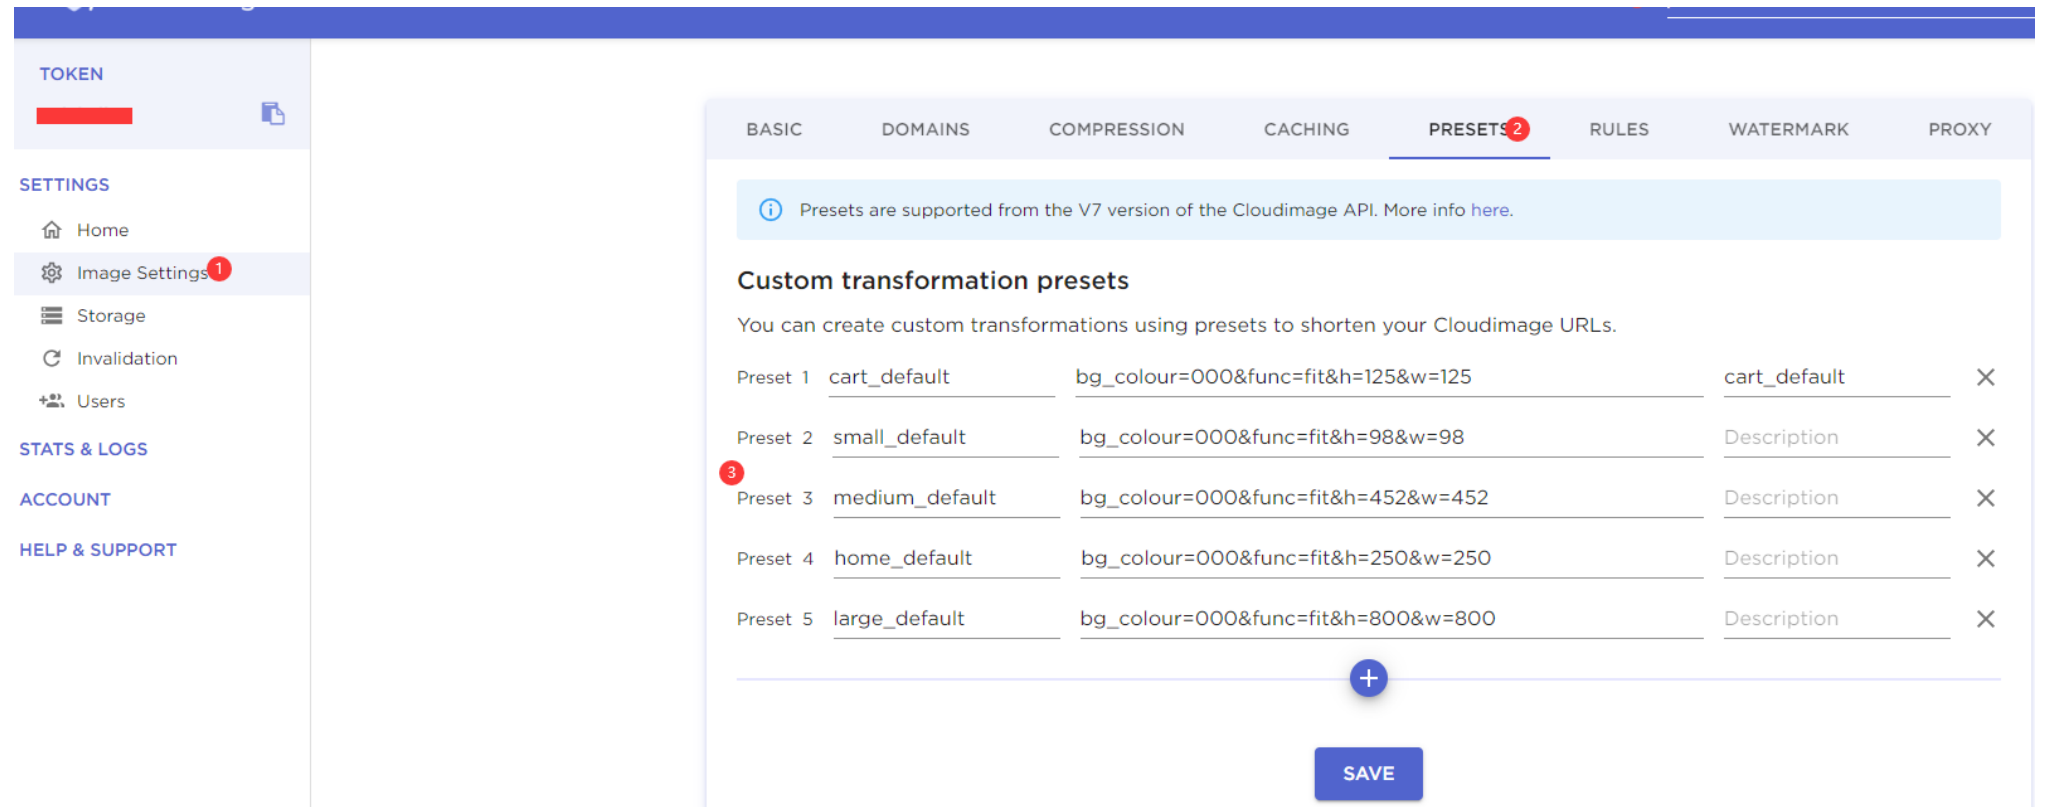

```
]);  
if (!file_exists($resizedImagePath)) {  
    ImageManager::resize(  
        $mainImagePath,  
        $resizedImagePath,  
        (int) $image_type['width'],  
        (int) $image_type['height']  
    );  
}
```

```

ng  
  
foreach ($image_types as $image_type) {  
    /*  
    $resizedImagePath = implode(DIRECTORY_SEPARATOR, [  
        $imageFolderPath,  
        $id_image . '-' . $image_type['name'] . '.' . $ext,  
    ]);  
    if (!file_exists($resizedImagePath)) {  
        ImageManager::resize(  
            $mainImagePath,  
            $resizedImagePath,  
            (int) $image_type['width'],  
            (int) $image_type['height']  
        );  
    }  
    */  
  
    $url = $this->link->getImageURL(  
        isset($object->link_rewrite) ? $object->link_rewrite : $object->name,  
        $id_image,  
        $image_type['name']  
    );  
  
    $urls[$image_type['name']] = [  
        'url' => $url,  
        'width' => (int)$image_type['width'],  
        'height' => (int)$image_type['height'],  
    ];  
}
```

3、添加原始连接到CDN

4、添加图片大小到CDN， 图片大小来自于Prestashop

5、删除以前生成的小图片
